

# Mn-Zn Large size ferrite for high power **Material list of PC40**

## ■ MATERIAL CHARACTERISTICS

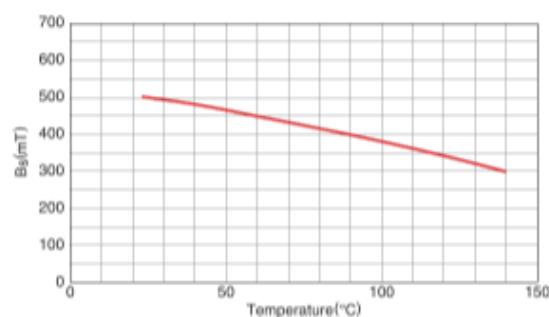

Initial permeability <sup>*</sup> $\mu_i$	Curie temperature $T_c$ (°C)	Saturation magnetic flux density <sup>*</sup> $B_s$ (mT) $H=1194A/m$	Remanent flux density <sup>*</sup> $B_r$ (mT)	Coercive force <sup>*</sup> $H_c$ (A/m)	Core loss <sup>*</sup> $P_{cv}$ (kW/m <sup>3</sup> ) $B=200mT$	Electrical resistivity <sup>*</sup> $\rho$ ( $\Omega$ )	Approximate density <sup>*</sup> $d_{app}$ (kg/m <sup>3</sup> ) $\times 10^3$	Thermal expansion coefficient <sup>*</sup> $\alpha$ (1/K) $\times 10^{-6}$	Thermal conductivity <sup>*</sup> $\kappa$ (W/mK)	Specific heat <sup>*</sup> $C_p$ (J/kg·K) $\times 10^7$	Bending strength <sup>*</sup> $\delta_{b3}$ (N/mm <sup>2</sup> ) $\times 10^7$	Young's modulus <sup>*</sup> $E$ (N/mm <sup>2</sup> ) $\times 10^{11}$	Magneto striction <sup>*</sup> $\lambda_s$ $\times 10^{-6}$
23°C		23°C   100°C   23°C		23°C	25kHz   90°C   100°C   100kHz   100°C								
2300	>200	500   380   125		15	64   70   420   6.5			4.8	12	5	800   9	1.2	-0.6

\* Typ.

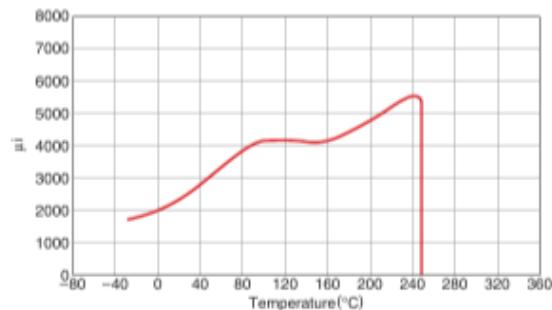

### □ Core loss vs. temperature characteristics (Typ.)

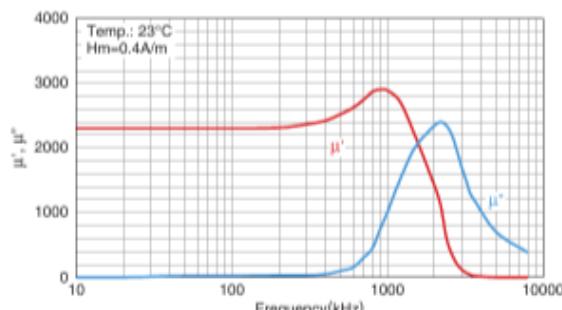

### □ Saturation magnetic flux density vs. temperature characteristics (Typ.)

### □ Initial magnetic permeability vs. temperature characteristics (Typ.)

### □ Magnetic permeability vs. frequency characteristics (Typ.)

### □ Core loss vs. frequency characteristics
